I enjoyed this game but it left my wanting more and making pay for the second part instead of just letting me play it right away. The story was written very well and some decisions I had to make made me want to go back and play it again.

I enjoyed this game and hope to enjoy the second one too

7.5/10 good but left me wanting more. 'The Washington Savages'

I laughed.. This is an interesting chess game. You can select two modes: Normal or 3D chessboard. It also includes many useful features, such as save and load. Your rival can be set to a human, a computer (IBM) or a network player (Modem). But I don't know how to set the last one.

By the way, I once thought this game was based on a sword and magic world. Until I saw that enemy king used a laser pistol to kill my soldiers...

Basic control:

Press ESC to enter the game.

Click LMB to select your chess piece and move it.

Hold RMB to open the game menu and select many options.

I have write a guide about how to use these menu options.. So much potential here. Got the game on sale for \$5 and I feel that is acceptable for only three levels. I hope there will be more levels or game modes added soon!. Exit is a wonderful puzzle game. It is simple, but I find it very relaxing to play and solve each level. The coins are a nice little bonus challenge as well, though not required to beat the level technically. Over 60 levels make this a pretty good buy, even if it is \$11.99 not to mention that the developer mentioned that there will be more levels coming out and will be available for FREE to anyone who buys the base game. You can play by clicking each ball with the mouse and then clicking again for the direction, or use the keyboard to choose directions and toggle between balls.

The three game modes are Easy, Normal, and Pro. Basically it just means that you have a tighter time limit the harder the difficulty you choose, and believe me when I say that it will pressure you on some levels. My advice to people playing this game is to analyze each level before starting to move the balls. The timer will not start counting down until you select a ball. Also, be patient with each move. I have screwed up a few times already by moving the wrong ball because I did not properly select the one I actually wanted to move.

As for what can improve the game, I can only think of two things. The first, and most important, would be an option to turn off the motion of the board. Although it does make it a bit disorienting (or who knows, it may be my current sleep deficiency) and therefore slightly more challenging, I think that some people may find it hard to look at if they get motion sick easily. The second thing would be more background music tracks. But to be honest that is asking for a bit much. It is a good game regardless of what music is playing in the background.

At the time that I am writing this review, I have only made it through 24 levels (not counting the demo) mostly because it is 2:45 AM. All of them have been a blast and I look forward to playing more of this game.. In mother russia, game title is ALL

But to clarify, the only thing that makes you buy the game is the title, the quality is poor, theres no tutorial and the gameplay is broken.

It should be an early access game, but I think we all knew it would be bad judging by the screenshots and videos :D. The controls are clunky and terrible, which really ruin the experience.

Left controller grip buttons, or trigger, seem to empty a bullet from the chamber rather than doing something sensible like releasing the flashlight from your hand - it's actually the menu button above the trackpad which is used to release the flashlight. You also can't turn the flashlight around in your hand to tactical aim with the pistol.

For \u00a32.87 will I refund it? No, it's \u00a32.87, but it's certainly a game that I won't recommend nor play any time soon.

I bought this game as a small "pass time" fling. But with current updates and continues improvements it has turned into a very entertaining game. I have even replayed the game several times trying out new strategies and approaches. What I thought was gonna be a one weekend pass time killing titel turned into be long love romance with a lot of value for money.. **THE ONLY YOU CAN LEGIT DO IS SPIN FIDGET SPINNERS. I WISH I WAS JOKING.**

It is hilariously bad.

edit: you can bowl too but its also awful. This game is not good. You can master all four difficulty levels in ten minutes. I got 660 points on Adolf difficulty (secret pro tip: put yourself in front of the Hitler tank.) by leaving the game running in the background while I wrote this review. It only ended because I killed my tank on purpose. I play a lot of bad games, but this one isn't polite enough to be bad in any sort of interesting direction.. I'm only reviewing the single player experience. I did not mess around with the multiplayer and honestly, not many games in VR will succeed with PvP, in fact, only very few will given the low player base to begin with. So don't buy this game for the PvP experience unless you have a friend with VR.

So I did not understand what people were talking about when they were reviewing this game. Some talk about an on-rails experience and others are talking about flying around. What gives? Well, the answer is that neither description is accurate. You don't really have free movement because you're chained to a platform. You can select different movement options, but the normal movement option is to move your hands to where you want to go and press grip. So you can move freely at times.

However, you cannot always freely move. It just depends on the location. So while you're usually constantly moving forward, you can move from side to side. And there are times where you will stop movement all together. And there will be times where your movement will be predetermined.

Regardless, you will be using different tactics depending on the circumstances. You can be shooting with a gun like attachment on your hands. Or you can be throwing a powerful ball at your enemies (seriously). Or you can use your shields. And of course, you can move around your platform to dodge, duck, side step enemy attacks. Many of the environments are destructible. Enemies can get behind you. Basically, you're controlling a lot of different variables making sure you get rid of the biggest threats and avoid damage as much as possible.

This game is fun. I think the whole chained to a platform is an interesting mechanic on how to deal with the problems inherent in VR. It definitely feels different than most other VR titles. You do have to think on your feet or die enough times to figure out how you're supposed to tackle the problems presented. This is more about strategy and attention to detail, than about quick reflexes or twitch aiming.

Sale Price Rating 7V10 (\$9.99) ... Normal Price Rating 6V10. Some games just grab you...this is one of those times. So simple, yet so entertaining. The sounds, movements, controller ability, are all great!!
